AI found 948 ways to root Linux. About $1,280 each.

Five moves from the last 48 hours that change a builder's week, plus three new courses.

OpenAI's unreleased cyber model wrote 948 root exploits

948

working Linux root exploits from one research run

WHAT HAPPENED

A mid-October run took 2,308 candidate kernel bugs, reproduced 1,724 and turned 948 into working local privilege escalations.

WHY IT MATTERS

That is about $1,280 of API credits per exploit. Attackers can buy the same run, so price AI security review like a pentest.

Cloudflare open-sourced its security audit skill

50%

roughly: the share of repeat-run findings one run catches

WHAT HAPPENED

One set of agents hunts. A fresh agent then tries to disprove each finding before it reaches the report. MIT licensed.

WHY IT MATTERS

Split the agent that finds from the agent that checks. Then schedule it, because one run misses about half.

OpenAI Images 2.6: 50% faster, now with GIFs

2 API tiers: Flare for speed, Sunburst for detail

WHAT HAPPENED

Live in ChatGPT, Codex and the API since 4 Nov. Adds marked-up edit regions and SVG export.

WHY IT MATTERS

Draft on Flare, finish on Sunburst. SVG export puts generated assets into design files, not only into feeds.

Meta bought Conductor. Its cloud shuts on 20 Nov

7 days

from read-only on 13 Nov to shutdown

WHAT HAPPENED

Conductor splits one coding project across several AI agents. Deletion of cloud user data starts on 20 Nov.

WHY IT MATTERS

Agent tooling is consolidating. Keep an export path and a second tool someone has already tested.

SWE-2 Flash runs at one-fifth of SWE-2's price

1/5

of SWE-2's price, inside Devin

WHAT HAPPENED

Cognition's new model: 276B parameters with 12B active, built on Thinking Machines' Inkling-Small. Weights withheld.

WHY IT MATTERS

Route routine tasks to the cheap tier and judge it on cost per finished task, not per token.

Worth an evening this week

Claude Code 2026: Agents Teams, Subagents, MCP & Skills

28 lectures in 2h 35m on CLAUDE.md, skills, MCP, hooks and scheduling. Updated October 2026.

Two prices landed this week

Finding a path to root now costs about $1,280. Routine coding just got a tier at one-fifth the price. Whoever owns the budget line for AI review now decides how secure the product is.

Put AI security review on the launch checklist, with a budget and a schedule.
