Stolen AI keys from one breach ran up about $740,000.

Railway's attacker went for AI provider keys first. Five moves from 10 Nov that change a builder's week, plus two free courses.

Railway's attacker went for the AI keys first

$740K

of AI usage on stolen keys, Railway's estimate

WHAT HAPPENED

An attacker partly escaped a shared build machine on 20 Oct, then decrypted customer variables. Up to about 100,000 workspaces may be exposed.

WHY IT MATTERS

Refunds depend on who issued the key: Bedrock and Gemini cover fraud, OpenAI decides case by case, OpenRouter has a no-refund policy. Cap every key.

A breach at Fireworks exposed Notion AI chats

<1% of Notion workspaces, most chats with no user or workspace label

WHAT HAPPENED

Fireworks served open-weight models for Notion. Attackers reached its machines through a cloud provider on 24 Oct. Notion has cut Fireworks off.

WHY IT MATTERS

Your vendor's vendors hold your data too. Fireworks says its zero-retention inference shows no impact so far. The stored data was what got hit.

Gemini 4 Carbon is out. The price doubles on 1 Dec

$4 per 1M input tokens from 1 Dec, up from $2. Output: $10 to $20

WHAT HAPPENED

Google's model for cyber work and long agent runs opened to paid API users on 10 Nov. Google reports #1 on CursorBench 4.0 and AutomationBench.

WHY IT MATTERS

Google says Argon still suits most work and Carbon spends more tokens. Cost any pilot at $4 and $20, not at the launch price.

Claude gets Sheets. Claude Data goes default-on

19 Nov

when Claude Data turns on by default for Enterprise

WHAT HAPPENED

Sheets and Whiteboards are in beta on all paid plans and export to .xlsx, CSV, docs or decks. Claude Data, formerly Dashboards, is now GA.

WHY IT MATTERS

Admins can scope each connector, say read Slack but never send, and set spend limits. Decide your Claude Data setting before 19 Nov.

New York: report AI incidents within 72 hours

72h

to report a critical safety incident, for labs above $500M revenue

WHAT HAPPENED

RAISE Act registration opened on 10 Nov. Large frontier developers must register by 1 Jan 2027 and publish safety frameworks. Fines reach $3M.

WHY IT MATTERS

It binds your model vendor, not your app. Its regulator sits inside NY's financial regulator. Ask vendors how fast you would hear of an incident.

Two free courses for this week

YOUTUBE FREE

Learn Agentic Coding with Codex

freeCodeCamp, about 2 hours, posted 10 Nov. Includes using Git safely with an agent and protecting API keys and secrets.

YOUTUBE FREE

The Anatomy of an AI Data Center

freeCodeCamp, 8 hours, posted 16 Oct. Power, cooling and networking, then GPU cloud economics and capacity contracts.

An AI key is a card number now

Whoever holds it can spend on it, and the issuer decides whether you get the money back. One breach put about $740,000 on stolen keys. Guard AI keys the way a payments team guards card numbers.

Give every AI key a cap, an owner and a revocation plan.
