Same token price. $0.14 a task versus $0.41.

Meta's Muse Ember lists at Claude Haiku 5.5's price. Four launches on 9 Nov, the bill behind each, and two free courses.

Muse Ember: Haiku's price, a third of the bill

$0.14

per Artificial Analysis task, against $0.41 for Claude Haiku 5.5

WHAT HAPPENED

Meta's new small model lists at $0.10 in and $0.50 out per million tokens, the same as Haiku 5.5. Both score 36 on the AA index.

WHY IT MATTERS

Same sticker, about a third of the cost per task, because the bill follows tokens spent. Compare models on dollars per finished task.

Claude Fable 5.2 is 20% cheaper. Read the terms

$8 per million input tokens, down from $10. Output is $40, down from $50

WHAT HAPPENED

Anthropic's top model has a 1M context and leads the AA index at 65. Mythos 5.2 is the same model, for vetted security and bio teams.

WHY IT MATTERS

It still costs 2x Opus 5.5 per token and needs 30-day data retention unless Anthropic approves zero retention. Clear both first.

ChatGPT Enterprise now bills through AWS

4 products in one listing: Chat, ChatGPT Work, Codex and dots

WHAT HAPPENED

Sold by OpenAI, billed by AWS, and eligible spend counts toward AWS commitments. Pricing comes as a private offer.

WHY IT MATTERS

The invoice moves to AWS. OpenAI stays the data processor, with AWS as a subprocessor, so the vendor review still has to happen.

Google Maps in AI Studio: prototype with no card

100 free calls per API per day in the AI Studio sandbox

WHAT HAPPENED

Describe a map app to Gemini and AI Studio wires in Maps, Places and Routes with no credit card, then shows a live map.

WHY IT MATTERS

A branch finder or delivery map can be demoed in one sitting. Production needs a billing account, so price it before you promise it.

Two free courses for this week

YOUTUBE FREE

Jev: Prefill-Only Inference from Scratch

freeCodeCamp, about 2 hours, posted 29 Oct. Models that decide in the prefill pass, with no token-by-token decoding.

YOUTUBE FREE

Hybrid Search in PostgreSQL: BM25 + Vectors

freeCodeCamp, about 1 hour, posted 21 Oct. Keyword and vector search in one database, merged in SQL.

Same price, different bill

Ember matches Haiku's sticker and costs a third per task. Fable 5.2 got cheaper and still runs 2x Opus 5.5 per token. The AWS listing moves the invoice, not the data.

Price the finished task, not the token. Then read the retention terms.
