Claude now reads 24 months of your bank history. Read-only.

Five launches from 5 to 7 Nov and the fences around them, plus two free courses.

James Liu · Market Ops Notes

Claude can read your bank. It can't move money

24 months of transactions it reads, across up to 16 US banks

WHAT HAPPENED

Anthropic's Personal Finance beta links accounts through Plaid for US Pro, Max and Ultra users. Read-only, and off in Claude Code.

WHY IT MATTERS

An assistant now sees the same feed as a budgeting app. Insight stops being the moat; what you are licensed to do with the money is.

GPT-6 Cyber ships invite-only

$100 per million output tokens, for approved Daybreak Red orgs

WHAT HAPPENED

Rated Critical for cybersecurity. Orgs need SSO, MFA and IP allowlisting. Individuals also need a physical FIDO2 key.

WHY IT MATTERS

Copy the access model for your own strong AI tools: verified identity, hardware keys and allowlisted networks first.

DeepMind's agents found two cracks in 1024-bit RSA

30X cheaper to factor each extra 1024-bit key in a batch

WHAT HAPPENED

Agents guided by cryptanalysts also found a signature forgery about 1,600x better than the old best, in theory. RSA-2048 is untouched.

WHY IT MATTERS

1024-bit keys still hide in old HSMs, VPN boxes, firmware and internal PKI. Inventory them this week and set retirement dates.

Gemini Omni 1.2 Flash: 15-second clips, 30% cheaper

$1.05

list price of one 15-second 720p clip at $0.07 a second

WHAT HAPPENED

Generally available on Google Cloud since 6 Nov. Clips run up to 15 seconds, up from 10, with an invisible SynthID watermark.

WHY IT MATTERS

A 15-second ad variant now costs about a dollar to draft. The real cost moves to human review and the media behind the winners.

Microsoft runs a coding agent on one GPU

24 GB of GPU memory runs Qwen3.8-27B behind GitHub Copilot

WHAT HAPPENED

Foundry Local serves a 4-bit Qwen3.8-27B, about 18 GB, to Copilot via bring-your-own-key. Microsoft says code never leaves the machine.

WHY IT MATTERS

Code that can't leave the building gets an agent without a cloud exception. Expect weaker reasoning than frontier models.

Two free evenings this week

YOUTUBE FREE

MCP Security Fundamentals

freeCodeCamp, about 2 hours, posted 29 Oct. Break the lethal trifecta with architecture, not prompt filters.

YOUTUBE FREE

Learn Vector Databases for Beginners

freeCodeCamp, 1.5 hours, posted 3 Nov. Embeddings, HNSW and IVF indexes, then a ChromaDB search build.

The fence is the feature

Claude reads your bank but can't move a cent. GPT-6 Cyber needs hardware keys. Microsoft's coding agent never leaves the laptop. Pick the fence before the model.

Write the permissions first: what the AI reads, what it can do, where it runs.
